

MA NGOC HIEU

Front-End Software Engineer

Ho Chi Minh City, Vietnam

- P 0912590467
- E hieumn2001@gmail.com
- W hieunotorious.vercel.app

EDUCATION

Information Technology

University of Economics and Finance
Aug 2019 - Aug 2023

SKILL

React.js / Next.js

TypeScript

JavaScript

HTML / CSS

Tailwind CSS / SASS

Git / GitHub

SOFT SKILLS

- Teamwork
- Adaptability
- Agile Scrum
- Problem - solving
- Creativity
- Good Team Player
- Clear communication Skill

LANGUAGE

English – 755 TOEIC

Vietnamese – Native

ABOUT ME

Motivated Software Engineer with a strong eagerness to learn and grow in real-world environments. Known for attention to detail, structured thinking, and a proactive mindset. Passionate about building efficient, user-focused solutions and contributing meaningfully to team success through continuous improvement and collaboration.

WORK EXPERIENCE

Key responsibilities, product impact and measurable achievements across different frontend projects.

• Front End Software Engineer 2024-2026

XHEROZONE / Ho Chi Minh City

- React
- Next.JS
- Performance optimization
- E-commerce
- CRM/ERP systems
- Admin dashboard

• Front End Software Engineer 2023-2024

ONEBIT / Ho Chi Minh City

- React
- Web3/ethers.JS
- DeFi UX
- Smart contracts
- Next.JS
- MetaMask intergration

FOCUS AREAS

- Component-driven UI architecture
- ERP / CRM frontend systems
- Performance & rendering optimization
- Scalable frontend architecture

SELECTED PROJECTS

• ERP Management Interface — NextJs / TypeScript

2025-2026

Descriptions:

- Project & Planning: Project structuring, ownership, timelines & progress tracking with templates.
- Task & Requests: Task alignment, status tracking & request handling.
- Documents: Centralized contracts, templates & document management.
- Reporting: Performance tracking & exportable analytics.
- Organization: Organizational structure & team management.

Achievement:

- Improved project execution by standardizing planning, task management, and document workflows across teams.
- Enhanced visibility and decision-making through structured reporting, real-time tracking, and centralized organization management.

 90%

My Role: Lead Engineer

Experience:

- Built system admin interfaces for platform configuration and performance analytics dashboards.
- Developed user and access control UI with role-based permissions and activity logging.
- Optimized the codebase and implemented HTTP caching, increasing website performance by 30%.
- Designed inventory management UI supporting multi-warehouse operations, inbound flows, and stock transfers.
- Developed features for the Admin Panel and implemented a real-time function using Firebase

• CRM / ADMIN — ReactJs / JavaScript

2024-2026

Descriptions:

- System Administration: Platform configuration & performance analytics.
- User & Access: Account management, role-based permissions & activity logs.
- CRM: Customer data, service requests & team coordination.
- Inventory: Multi-warehouse operations, inbound & stock transfers.
- Multi-platform: Web content & cross-platform task/QR data management.

Achievement:

- Streamlined system operations by centralizing user access, CRM, inventory, and multi-platform management into a unified platform.
- Improved operational transparency and efficiency with real-time analytics, role-based control, and cross-platform data synchronization.

My Role: Front-End Software Engineer

Experience:

- System Administration: Configure platform settings and access high-level analytics for overall system performance.
- User & Access Management: Manage user accounts, define role-based permissions, and track admin/user activity logs for full transparency.
- CRM Management: Centralize customer data, handle service requests, store in-depth consultation records, and coordinate design and customer support teams.
- Inventory Management: Operate a multi-layer warehouse system (supplier, asset, product); manage inbound orders and internal stock transfers.
- Multi-platform Operations (App & Web): Manage content (news, events, projects) on web platforms while coordinating schedules, tasks, QR codes, and scan data from mobile applications.

• E-Commerce Website — NextJs / TypeScript

2024

Descriptions:

- Marketplace: Product discovery & seamless online purchasing.
- Service Booking: Online registration for services, courses & rituals.
- Knowledge Hub: Centralized articles, videos & event content.
- Transactions: Order tracking, purchase history & warranty management.
- Branch Locator: Nationwide branch search with maps & contacts.
- Support Center: Direct support, live Q&A & account management.

Achievement:

- Delivered a seamless marketplace and service booking experience with optimized UX for product discovery, transactions, and content access.
- Improved user engagement through integrated dashboards, knowledge hub, branch locator, and real-time support features.

Tech Stack: NextJs TypeScript Tailwind CSS

Participation  70%

My Role: Front-End Software Engineer

Experience:

- Built responsive marketplace UI for product discovery and seamless purchasing flow.
- Developed booking interfaces for services, courses, and ritual registrations with streamlined UX.
- Implemented content-driven Knowledge Hub (articles, videos, events) with optimized loading and navigation.
- Designed transaction dashboards for order tracking, purchase history, and warranty management.
- Integrated map-based branch locator with search, filtering, and contact interactions.
- Developed features for the Admin Panel and implemented a real-time function using Firebase

• Blockchain Website — ReactJs / JavaScript

2023

Descriptions:

- Launchpad: Early-stage token sales (IDO/ICO-style) enabling users to invest before listing.
- Staking: Hold/stake ONB to unlock tiered access with higher allocation and priority.
- Ecosystem: Airdrops, staking rewards, price prediction, VIP NFTs, and exclusive deals.

Achievement:

- Delivered a responsive Web3 launchpad UI with wallet integration, enabling seamless token sales, staking, and tier-based access.
- Enhanced user experience and reliability through real-time dashboards, optimized transaction flows, and consistent on-chain data handling.

Tech Stack: ReactJs JavaScript SASS

Team Size: 4 members

Participation  90%

My Role: Front-End Software Engineer

Experience:

- Built responsive Web3 UI for a launchpad platform enabling token sales (IDO/ICO), staking, and tier-based access.
- Integrated wallet connection (e.g., MetaMask) and handled on-chain interactions (staking, token balance, transaction states).
- Developed dynamic dashboards for investment tracking, tier status, and real-time project participation.
- Optimized performance and UX for high-frequency actions (transactions, loading states, async blockchain data).
- Collaborated with back-end & smart contract teams to ensure seamless Web3 data flow and state consistency.
